

When to keep your child in your care at home:

If your child has:

1. A fever at or above 101 degrees
2. They are vomiting
3. Have diarrhea from an illness
4. or are excessively coughing.

Please keep your child home until they are fever-free, free from vomiting and diarrhea for 24 hours before sending them back to school.

Students are not permitted to stay in at recess time without a doctor's order. If a student is well enough to come to school, they will be considered well enough to participate in outdoor recess.

If your child is unable to attend school, please call the school daily to report an absence. If children are so ill that they are unable to attend school for more than 3 consecutive days, please consider contacting your physician. Please forward all doctor and dentist notes to the office to change the attendance record from a "parent requested absence" which may be excused or unexcused depending on how many days your child has missed to an "excused doctor's absence". Please see your school's attendance policy for more information.

If your child has a skin infection or rash: If the infection or rash does not seem to be clearing, you are strongly encouraged to call your health care provider and tell them of the situation as soon as possible.

Please cover all cuts, abrasions and rashes with a band-aid or dressing before coming to school. Students with lesions, sores or rashes that are red, swollen, or draining fluid will be excluded from participating in PE, or recess sports that have skin-to-skin contact unless there is a doctors' release.
